

In-tensive Move

Jouni Leino

inno

Leino's In-tensive Move Table is a compact, modular solution designed to enhance flexibility in dynamic workspaces. With a convenient folding mechanism, it saves space when not in use, while wheels allow for easy mobility. The table can be equipped with electric units for added functionality, and a linking device enables the creation of larger table configurations for meetings or collaborative spaces. This versatile design makes it ideal for modern, adaptable work environments.
